# *Index to* The WELDING JOURNAL *volume 27—1948*

Published by the American Welding Society, 33 West 39th Street, New York 18, N. Y.

### *a.* The Welding Journal

This part includes general technical articles, papers presented before Section and National meetings, articles for the practical welder and designer, news, biographical items, current welding literature and advertising.

Page Allocation by Issues

| | | | |
|---|---|---|---|
| January | 1– 96 | July | 507– 586 |
| February | 97–176 | August | 587– 666 |
| March | 177–274 | September | 667– 776 |
| April | 275–346 | October | 777– 898 |
| May | 347–426 | November | 899–1004 |
| June | 427–506 | December | 1005–1108 |

### *b.* Welding Research Supplement

This section includes the reports of the Welding Research Council, critical digests of the literature, reports of the Project Committees and research reports of industry.

Page Allocation by Issues

| | | | |
|---|---|---|---|
| January | 1-s– 32-s | July | 321-s–384-s |
| February | 33-s– 96-s | August | 385-s–432-s |
| March | 97-s–160-s | September | 433-s–480-s |
| April | 161-s–216-s | October | 481-s–520-s |
| May | 217-s–272-s | November | 521-s–568-s |
| June | 273-s–320-s | December | 569-s–616-s |

## *a.* THE WELDING JOURNAL

## *Subject Index*

Acetylene Cylinder—C. Ness, 445–449.
Adams Lecture for 1947—Structural Strength of the Welded Joint—G. S. Mikhalapov, 193–206.
Air Conditioning and Refrigeration Parts, Welded and Brazed—Ward Swarthout, 511–516.
Aircraft—Propeller Hubs Arc Welded—Clarence C. Mast, Paul F. Hackenthal and Douglas W. Hamilton, 605–609.
Aluminum Field-Erected Storage Tanks—Fred L. Plummer, 796–804.
Arc-Welding Equipment, Inspection and Preventive Maintenance of—Volney H. Speck, 303–304.
Automatic Arc and Gas Welding Processes in Automotive Industry—Committee Report, 27–35.
Automatic Arc-Welding Alloy Steel Plates—Howard L. Miller, 916–920.
Automatic Shape-Welding by the Submerged-Melt Welding Process—J. A. Kratz, 5–10.
Automotive Gray Iron Castings, Salvaging of—Committee Report, 351–358.
Automotive Industry, Survey of Automatic Arc and Gas Welding Processes in—Committee Report, 27–35.

Beam Connections and Special Rigid Frame Details of New Airco Laboratory—LaMotte Grover, 130–135.
Brazing and Other Applications of High-Frequency Heating—H. Bunte, 441–444.
Brazing of Air Conditioning and Refrigeration Parts—Ward Swarthout, 511–516.
Brazing, Silver Alloy, Production Methods—A. M. Setapen, 136–139.
Bridge Construction, Proposed Specification for Steel St. L. 37—P. Schoonmaker and Committee, 117.
Bridge Welding—Bridge Road Welded in Switzerland—A. Lumbotte, 729–730.
Bridges, Welded—LaMotte Grover, 812–826.

Cast Iron Repair—K. H. Koopman, 951–954.
Cast Iron Repairs, Recommended Practices for Salvaging Automotive Gray Iron Castings—Committee Report, 351–358.
Cast Iron Welding, 530.
Cast Iron, Welding Techniques for—T. E. Kihlgren, 19–25.
Castings, Preheated—F. C. Geibig, 591–592.
Contact Electrodes and Applications of Contact Arc Welding—P. C. van der Willigen and G. Zoethout, 615–620.
Contraction—Counteracting Warping—E. F. Kurzinski, 37–38.
Copper Vessels, Arc-Welding of—J. J. Vreeland, 125–129.
Copper Vessels Welded by Inert Gas-Shielded Arc—John W. Mortimer, 715–722.
Cutoff Machine, Structural I-Beam—George J. Strate, 936–941.
Cutting in Steel Mills—A. H. Yoch and W. Begerow, 188–192.
Cutting Stainless Steel, Use of Flux-Injection for—G. E. Bellew, 118–124.
Cutting with Powder as a Production Tool—D. H. Fleming, 181–187.

Design and Fabrication of Welded Light-Weight Pressure Vessels—J. J. Chyle, 831–837.
Design of Farm Welding Equipment—Ernest J. Koop, 850–854.
Design of Welded Ships—Milton Forman, 671–678.
Design of Weldments, Clinical Approach to—Gerald von Stroh, 207–216.
Design, Welding Machinery—J. Mikulak, 290–298.
Diesel Engine Structures, Fabricated—C. B. M. Dale, 531–535.
Diesel Locomotive Maintenance Welding—R. L. Rex, 1034–1042.
Dimensional Changes in Steel—L. C. Bibber, 1009–1024.
Dissimilar Metals—Welding, 604.

Electrodes, Overheating of—I. L. Stern, 522–526.

Fabrication of Shipping Containers—G. J. Green and D. H. Marlin, 1043–1048.
Filler Metal—A New High-Strength Welding Rod—Lester Tarnopol, 517–521.
Filler Metal—Contact Electrodes—P. C. van der Willigen and G. Zoethout, 615–620.
Filler Metal—Overheating of Electrodes—I. L. Stern, 522–526.
Filler Metal Specifications for Gas Welding Rods (French)—Abstracted by G. E. Claussen, 223–224.
Fixtures for Arc-Welded Equipment—Harold H. Hicks, 1024–1028.
Flame-Hardening Machine Tool Parts—W. D. Whalen, 11–18.
Flame Hardening Methods and Techniques—J. R. Burg, 805–809.
Flame Hardening—Principles, Applications and Equipment—Merrill S. Rosengren, 453–455.

Gas Holder, Development of Arc-Welded—Arthur C. Thompson, 363–368.

Hardening of Rail Ends and Open Hearth Frogs—R. W. Torbert, 107–110.

"Heliarc" Welding, Electrical Characteristics of the Arc in—H. T. Herbst, 600–604.
Helium, High-Purity, Saves Money on Aluminum Welds—William A. Mays, 609.
Heli-Welding Stainless Steel—Bernard Blickman and Newton Blickman, 945–950.
Helmets—The Comparative Performance of Air-Supplied Welding Helmets—Merril Eisenbud and Leslie Silverman, 287–289.
High Alloys for Aircraft, Welding and Fabrication of—C. G. Chisholm, 217–223.
High-Temperature Alloys, Welding and Fabrication of—C. G. Chisholm, 217–223.

Inert-Arc Welding Circuits, Effect of Wave Shape in—R. W. Tuthill, 785–788.
Inert-Arc Welding, New Applications of—R. W. Tuthill, 299–301.
Inert-Arc Welding, Power Supply for—A. U. Welch, 376–378.
Inert-Gas-Shielded Arc Welding, Mechanized—H. T. Herbst, 111–117.
Inert Gas-Shielded Arc Welding Pure Copper—John W. Mortimer, 715–722.
Inert Gas Shielded Metal Arc-Welding Process—Jesse S. Sohn and A. N. Kugler, 913–915.
Inert Gas Welding, Characteristics of the Arc—H. T. Herbst, 600–604.
Inert Gas Welding Railroad Equipment—N. G. Schreiner and J. M. Tippett, 431–437.
Inert Gas Welding Stainless Steel—Bernard Blickman and Newton Blickman, 945–950.
Inspection-Sampling of Welds by Trepanning and Allied Methods—R. B. Lincoln, 809–811.

Lead Welding—Storage Battery Work—W. E. Bowser, 36–37.
Locomotive, Diesel, Maintenance Welding—R. L. Rex, 1034–1042.
Locomotive, Diesel, Welding of—H. S. Swan, 929–935.
Locomotive Repair Shops, Welding Practices in—J. Michne, 781–784.

Machine Design, Welding in—J. Mikulak, 290–298.
Machinery—Fabrication—J. R. Stitt, 48–51.
Machinery—Welding a Roto-Clone Impeller—Harrington Powers, 51–52.
Maintenance Department in a Paper Mill—Jamison Moore, 793–795.
Maintenance of Oxyacetylene Equipment—G. E. Phelps, 452.
Maintenance Welding in a Steel Plant—Frank J. Gaydos, 527–530.
Metallizing as a Production Process—Knowles B. Smith, 941–944.

Nickel and Nickel Alloys, Spot-Welding Schedules for—Frank G. Harkins, 695–702.
Nondestructive Testing of Welds with Supersonic Waves—Benson Carlin, 438–440.

Oxyacetylene Flames, Stability of—Lewis D. Conta, 921–928.
Oxyarc Cutting, Theory of—Discussion of—D. Rosenthal, 358.

Penetration and Travel Speed in Metal Arc Welding—R. Gunnert, 542.
Powder Cutting as a Production Tool—D. H. Fleming, 181–187.
Power Needs of American Industry—F. R. Benedict, 450–452.
Practical Welder and Designer
ABC's of Straight-Line Cutting—J. Villoresi, 1051–1052.
All-Welded Engineering Building—R. H. Davies, 1052–1053.
Another Easy Job for Your Blowpipe—I. Kurzinski, 955–956.
Back on the Job Because They Were Bronze Welded—H. B. Gilson, 1054–1055.
Brazing Aluminum—G. W. Birdsall, 855–856.
Eccentric Guides Welding Head to Make Small Circular Welds, 950.
Future Welded Design of Farm Equipment—Ernest J. Koop, 850–854.
Getting Ready to Weld—H. B. Gilson, 538–541.
Here's a Way to Preheat Castings—F. C. Geibig, 591–592.
How to Design Levers, 1049–1051.
How to Make Them Last—J. E. Dato, 726–727.
It's Easy to Weld Pulleys and Gears—F. F. Mooney, 728.
Repairing Cast Iron—K. H. Koopman, 951–954.
The Road Bridge to the Rupperswil-Auenstein Hydroelectric Plant in Switzerland—A. Lumbotte, 729–730.
Stainless Steel, 1056–1057.
Taking Care of Small Castings—H. B. Gilson, 955.
Tapered Bore of Two-Ton Rebuilt by Unionmelt Process, 856.
Two Ways to Remove Frozen Nuts—F. C. Giebig, 928.
Welding a Bronze Bell-Marcus Maynard, 854.
Welding Spiral Flights with Automatic Tractor Inside 4-Ft. Diam. Kiln—J. W. Hill, 723–724.
You Can Make Rusted Fenders Good as New—F. C. Geibig, 725–726.
Preheating Castings—F. C. Geibig, 591–592.
Pressure Vessels, Copper, Inert Gas-Shielded Arc Welding of—John W. Mortimer, 715–722.
Pressure Vessels, Design and Fabrication of—J. J. Chyle, 831–837.
Pressure Vessels—Submerged Melt Welding of—E. A. Smith, 536–538.
Pressure Vessel Welding by the Submerged-Melt Welding Process—J. A. Kratz, 5–10.
Pressure Welding, Multiple Flame Process—N. H. Cuke, 39–47.
Projection Welding—Robert A. Reich, 610–612.
Propeller Hubs Arc-Welded—Clarence C. Mast, Paul F. Hackenthal and Douglas W. Hamilton, 605–609.

Rail Ends and Open Hearth Frogs, End Hardening of—R. W. Torbert, 107–110.
Railroad Equipment, Construction and Maintenance of by Submerged and Gas-Shielded Welding—N. G. Schreiner and J. M. Tippett, 431–437.
Railroad Freight Cars Welded by Submerged Arc—E. A. Watson, 789–793.
Railroad—Locomotive and Car Shop Welding Practices—J. Michne, 781–784.
Refrigeration Parts, Welded and Brazed—Ward Swarthout, 511–516.
Repair of Welded Ships—L. F. Bledsoe, 690–694.
Repairing Cast Iron—K. H. Koopman, 951–954.
Repairs of Hydro-Turbine Blades, 844.
Residual Stress Investigations—Adams Lecture—G. S. Mikhalapov, 193–206.
Resistance Welded Stamped Grid Resistors—W. J. Kutcher and A. L. Ward, 827–830.
Resistance Welding Applications in the Radio Tube Industry—George Freedman, 838–844.
Resistance-Welding Characteristics of the Dry Disk Rectifier Welder—C. E. Smith and R. H. Blair, 679–686.
Resistance Welding Crossed Wires—Raymond C. Jones, 703–714.
Resistance Welding Equipment, Maintenance of—F. R. Woodward, 301–303.
Resistance Welding Fabrication of Stainless Steel Clad Plate—O. R. Carpenter, 279–287.
Resistance Welding Trends Here and Abroad—F. R. Hensel and E. F. Holt, 903–912.
Resistance Welding Utilizing D.-C. Kinetic Energy Storage—Thomas J. Crawford, 359–362.
Rigid Frame Designs, Welded—Martin P. Korn, 369–375.
Rigid Frame Details and Beam Connections of New Airco Laboratory—LaMotte Grover, 130–135.
Rigid Structures—Martin P. Korn, 135.

Sampling of Welds by Trepanning and Allied Methods—R. B. Lincoln, 809–811.
Seam Weld Attachments for Spot Welders with Rocker Arm—W. S. Horth, 305–306.
Ship Design—Factors to Be Considered in—Milton Forman, 671–678.
Ships, Repair of Welded—L. F. Bledsoe, 690–694.
Ship, Structural Failure of a Riveted—E. M. MacCutcheon, 52–54.
Silver Alloy Brazing, Production Methods of—A. M. Setapen, 136–139.
Speed in Metal Arc Welding—R. Gunnert, 542.
Spot Welders with Seam Weld Attachments—W. S. Horth, 305–306.
Spot Welding of Mild Steel in Production—N. E. Wheeler, 613–614.
Spot-Welding Schedules for Nickel and Nickel Alloys—Frank G. Harkins, 695–702.
Spot Welding Stamped Grid Resistors—W. J. Kutcher and A. L. Ward, 827–830.
Spot-Welds, Testing, 535.
Stainless Steel Clad Plate, Manufacture and Application of—O. R. Carpenter, 279–287.
Stainless Steel, Heli-Welding of—Bernard Blickman and Newton Blickman, 945–950.
Stainless Steel, Use of Flux-Injection Cutting for—G. E. Bellew, 118–124.
Stainless Steel Welding, 1056–1057.
Storage Battery Work—W. E. Bowser, 36–37.
Structural—Arc-Welded Steel Framing Reduces Cost of Residential Building—A. F. Davis, 788.
Structural—Future Developments in Welded Steel Buildings—Arsham Amirikian, 593–599.
Structural—Heavy Flexible Beam and Girder Connections—Harry Greaves, 845–849.
Structural I-Beam Cutoff Machine—George J. Strate, 936–941.
Structural—Standardized Welded Beam Connections and Special

Rigid Frame Details of New Airco Laboratory—LaMotte Grover, 130–135.
Structural Strength of the Welded Joint—Adams Lecture—G. S. Mikhalapov, 193–206.
Structural—Design of Welded Rigid Frames—Martin P. Korn, 369–375.
Structures, Rigid—Martin P. Korn, 135.
Stud Welding Saves Time, 811.
Submerged Arc Welding Reduces Time on U68 Code Work by 42%—E. A. Smith, 536–538.
Submerged-Melt Shape-Welding—J. A. Kratz, 5–10.
Supersonic Wave Method of Testing Welds—Benson Carlin, 438–440.
Symbols, Welding, Story of—Leon C. Bibber, 101–106.

Tanks—Development of Arc-Welded Gas Holder—Arthur C. Thompson, 363–368.
Tanks, Field-Erected, of Aluminum—Fred L. Plummer, 796–804.
Tool Parts, Machine, Flame Hardening—W. D. Whalen, 11–18.
Training Welding Technicians on a College Level—Richard C. Wiley, 686–689.
Trepanning, Sampling of Welds—R. B. Lincoln, 809–811.
Tube Welding, High-Speed Oxyacetylene—H. O. Jones, 25–26.

Warping—Counteraction by Contraction—E. F. Kurzinski, 37–38.
Weldability of Cast Low-Alloy Steels—V. T. Malcolm and S. Low, 1029–1033.
Welding Research Problems, 569–576.
Weldment Design, Clinical Approach to—Gerald von Stroh, 207–216.

## *a.* WELDING RESEARCH SUPPLEMENT

### *Subject Index*

Aircraft—Weldability of Alloys for High-Temperature Service—George E. Linnert, 385-s–405-s.
Aluminum, Inert-Gas Arc Welding of—G. J. Gibson and G. R. Rothschild, 496-s–501-s.
Arc Phenomena with Electrodes Moving at High Speed—W. B. Kouwenhoven and T. Benjamin Jones, 470-s–475-s.
Arc Stability Investigations—Robert A. Wyant, Lauriston P. Winsor and L. McDonald Schetky, 502-s–515-s.
Arc Temperatures, Welding—W. R. Chynoweth, J. U. Jeffries, R. J. LaPante, R. J. Krieger and G. H. Fett, 426-s–427-s.
Arc-Welded Butt Joints of Mild Steel, Research on—Georges Welter, 321-s–369-s; Discussion—F. J. Winsor, 536-s–537-s, 567-s.
Backups for Grooved Weld Joints—Chester R. Austin and P. J Rieppel, 555-s–567-s.
Biaxial Tests of Flow and Fracture of Welded and Unwelded Tubes of Steel—L. V. Griffis, G. K. Morikawa and S. J Fraenkel, 161-s–168-s, 208-s.
Brittle Transition Temperatures as Determined by the Charpy Impact and the M.I.T. Slow-Bend Tests—C. W. MacGregor and N. Grossman, 159-s–160-s.
Brittle Transition Temperatures of Various Low-Carbon Steels Welded by the Same Method—N. Grossman and C. W. MacGregor, 267-s–271-s.
Carbide-Stabilizing Elements to Improve Weldability of Plate Steels—F. F. Franklin, 20-s–26-s.

Chrome-Moly Piping, Weldability of—R. C. Fitzgerald, A. B. Wilder, G. V. Smith and A. E. White, 457-s–469-s.
Chrome Nickel Welds—Effect of Weld Metal Composition on the Strength and Ductility of 15% Cr–35% Ni Welds—David Rozet, Hallock C. Campbell and R. David Thomas, Jr., 481-s–491-s; Discussion—T. E. Kihlgren, 610-s; Discussion—N. C. Jessen, 610-s–611-s.
Cleavage Fracture in Ship Plate Tests of Wide Notched Plates—A. Boodberg, H. E. Davis, E. R. Parker and G. E. Troxell, 186-s–199-s.
Cleavage Fracture of Ship Plates as Influenced by Size Effect—Wilbur M. Wilson, Robert A. Hechtman and Walter H. Bruckner, 200-s–207-s; Discussion—H. W. Wilson, 208-s.
Cleavage Fractures in Mild Steel, Development of—A. B. Bagsar, 97-s–123-s.
Cleavage Fracturing and Transition Temperatures of Mild Steel—A. B. Bagsar, 123-s–131-s.
Combined Stresses, Effect on Transition Temperature for Brittle Fracture—C. W. MacGregor and N. Grossman, 7-s–16-s.
Contact Resistance, Thermal—W. B. Kouwenhoven and J. H. Potter, 515-s–520-s.

Designs of Welded Hatch Corners for Ships—E. Paul DeGarmo, 50-s–68-s; Discussion—E. M. MacCutcheon, 69-s–70-s.

Electrode Coating, Influence of $CaCO_3$ Additions to—Manley W. Mallett, 28-s–29-s.
Electrodes, Comparative Behavior of Mild Steel Welds Made with E6010 and E6016—F. W. Daniels, F. S. Gardner and R. M. Rood, 436-s–440-s.

Fatigue Cracks, Rate of Propagation in Steel Plates with Severe Geometrical Stress-Raisers—Wilbur M. Wilson and James L. Burke, 405-s–408-s.
Fatigue of Metals as Affected by Brittle Transition Temperature Tests—C. W. MacGregor and N. Grossman, 132-s–143-s; Discussion—D. Swan, 143-s–144-s; Discussion—A. M. Freudenthal and T. J. Dolan, 428-s–432-s; Discussion—F. J. Winsor, 568-s.
Fatigue Strength of Mild Steel as Affected by Residual Tension Stress—L. D. Hall and Earl R. Parker, 421-s–425-s.
Fatigue Strength of Steel Beams, Flexural—Wilbur M. Wilson, 409-s–417-s.
Fatigue Testing of Arc Welded Butt Joints of Mild Steel—Georges Welter, 321-s–369-s.
Fatigue Tests of Spot Welds: Improvement of Their Endurance Limit by Hydrostatic Pressure—Georges Welter, 285-s–298-s.
Fatigue Tests of Welding Elbows and Comparable Double-Miter Bends—A. R. C. Mark, 310-s–320-s.
Flash Welding, Optimum Conditions—R. M. Curran, P. Patriarca and W. F. Hess, 577-s–592-s.
Flow and Fracture of Welded and Unwelded Tubes of Steel—L. V. Griffis, G. K. Morikawa and S. J. Fraenkel, 161-s–208-s.

Graphitization and Failure of Steel in Service—29-s.
Graphitization of Low-Carbon Low-Alloy Steel—G. V. Smith, 277-s–284-s.
Graphitization—Stability of Steels at Elevated Temperatures—A. B. Wilder and J. O. Light, 607-s–609-s.
Graphitization—Study of the Properties of 0.5% Chromium–0.5% Molybdenum Pipe Steel—R. C. Fitzgerald, A B. Wilder, G. V. Smith and A. E. White, 457-s–469-s.

Hatch Corners for Ships, Various Designs of—E. Paul DeGarmo, 50-s–68-s; Discussion—E. M. MacCutcheon, 69-s–70-s.
High Alloys—Effect of Weld Metal Composition on the Strength and Ductility of 15% Cr–35% Ni Welds—David Rozet, Hallock C. Campbell and R. David Thomas, Jr., 481-s–491-s; Discussion—T. E. Kihlgren, 610-s; Discussion—N. C. Jessen, 610-s–611-s.
Hydrogen Embrittlement in Oxyacetylene Pressure Welding—K. B. Young and H. J. Nichols, 30-s–32-s.

Impact Strength of Single Bead Arc Weld Deposits as Affected by Temperature—R. Eisenberg and R. J. Raudebaugh, 433-s–435-s.
Inert-Gas Arc Welding of Aluminum, Effect of D.-C. Component in A.-C.—G. J. Gibson and G. R. Rothschild, 496-s–501-s.

Magnesium Arc Welds, Eliminating Cracking in—P. F. George, 273-s–276-s.

Notch Tests of Arc Welded Butt Joints of Mild Steel—Georges Welter, 321-s–369-s.

Oxyacetylene Pressure Welding, Discussion of Hydrogen Embrittlement in—A. R. Lytle, 272-s.

Peening Weld Deposits for Stress Relief—Joe Lawrence Morris, 148-s–158-s.
Plastic Behavior of Wide Flange Beams—W. William Luxion and Bruce G. Johnston, 538-s–554-s.
Pressure Vessels—Hydrostatic Tests of Spherical Shells—Joseph Marin, V. L. Dutton and J. H. Faupel, 593-s–607-s.
Pressure Vessels—Strain Gage Analysis of a 50-Ft. Hortonsphere—Given Brewer, 476-s–480-s.
Pressure Welding, Oxyacetylene, Hydrogen Embrittlement in—K. B. Young and H. J. Nichols, 30-s–32-s.

Radiation from the Welding Arc, Its Effect on the Eye—E. van Someren and E. C. Rollason, 448-s–452-s.
Research Problems, 569-s–576-s.
Residual Stresses in a Butt-Welded Structural I-Beam—W. J. Krefeld and E. C. Ingalls, 417-s–420-s.
Residual Tension Stress, Effect on Fatigue Strength of Mild Steel—L. D. Hall and Earl R. Parker, 421-s–425-s.
Resistance of Metal Contacts, Thermal—W. B. Kouwenhoven and J. H. Potter, 515-s–520-s.

Safety—Radiation from the Welding Arc—E. van Someren and E. C. Rollason, 448-s–452-s.
Science and the National Welfare—E. U. Condon, 1-s–6-s.
Ship Plate Fracture Tests, Correlation with Laboratory Tests—E. P. Klier, F. C. Wagner, and M. Gensamer, 71-s–96-s; Discussion—R. E. Wiley, 96-s; Discussion—Henri M. Schnadt, 614-s–616-s; Discussion—A. J. K. Honeyman, 469-s–475-s.
Ship Structure Committee Report, 377-s–384-s.
Ship Structure Committee, Work of—Rear Admiral Ellis Reed-Hill, 33-s–34-s.
Ships, Hatch Corners for, Tests of Various Designs—E. Paul DeGarmo, 50-s–68-s; Discussion—E. M. MacCutcheon, 69-s–70-s.
Shrinkage Stresses in Spot-Welded Joints—Viktor Hauk, 453-s–456-s.
Size Effects on Static Notch Tensile Properties of Mild Steels—Finn Jonassen, 27-s.
Spot-Weld Shunting in 24St Alclad—A. R. Hard, 491-s–495-s.
Spot Welds, Fatigue Tests of—Georges Welter, 285-s–298-s.
Strain Aging in Welding Low-Carbon Structural Steel—W. H. Bruckner and W. E. Ellis, 441-s–447-s.
Strain Gage Analysis of a 50-Ft. Hortonsphere—Given Brewer, 476-s–480-s.
Stress Developments in High-Speed Rotating Disk Research at M.I.T.—C. W. MacGregor and W. D. Tierney, 303-s–309-s.
Stress in Arc Welds Made Under Transverse Restraint—Ernest F. Nippes and Warren F. Savage, 370-s–376-s.
Structural—Beams, Plastic Behavior of—W. William Luxion and Bruce G. Johnston, 538-s–554-s.
Structural—Fatigue Strength of Steel Beams—Wilbur M. Wilson, 409-s–417-s.
Structural—Residual Stresses in a Butt-Welded I-Beam—W. J. Krefeld and E. C. Ingalls, 417-s–420-s.
Structural Steel Beams, Prestretched—R. L. Buchwalter and Y. C. Shiu, 522-s–528-s.
Structural—Tests of Riveted and Welded Trusses—Georges Welter, 321-s–369-s.

Thermal Resistance of Metal Contacts—W. B. Kouwenhoven and J. H. Potter, 515-s–520-s.
Toughness of Structural Steel as Evaluated by Slotted Tensile Specimens—H. R. Thomas and D. F. Windenburg, 209-s–215-s; Discussion—E. M. MacCutcheon, 215-s–216-s.
Transition Behavior of Welded Carbon and Alloy Steels as Affected by Variations in Welding Technique—Clarence E. Jackson and William J. Goodwin, 253-s–266-s.
Transition from Shear to Cleavage Failure in Ship Plate and Its Correlation with Large-Scale Plate Tests—Noah A. Kahn and Emil A. Imbembo, 169-s–182-s; Discussion—E. M. MacCutcheon, 182-s–183-s; Discussion—A. B. Bagsar, 183-s–184-s; Authors' Closure, 185-s, 216-s; Discussion—A. J. K. Honeyman, 469-s, 475-s.
Transition Temperature as Revealed by the Static Notch Bar Tensile Test—Reply to Discussion, 158-s–159-s.
Transition Temperature for Brittle Fracture, Effect of Combined Stresses on—C. W. MacGregor and N. Grossman, 7-s–16-s.
Transition Temperature Investigation, Cleavage Fracture in Mild Steel—A. B. Bagsar, 97-s–123-s.
Transition Temperature, Meaning and Measurement of—R. D. Stout and L. J. McGeady, 299-s–302-s.
Transition Temperature Tests as Affected by Fatigue—C. W. MacGregor and N. Grossman, 132-s–143-s; Discussion—D. Swan, 143-s–144-s; Discussion—A. M. Freudenthal and T. J. Dolan, 428-s–432-s; Discussion—F. J. Winsor, 568-s.
Transition Temperatures, Comparison, as Determined by the

Charpy Impact and Slow Bend Tests—C. W. MacGregor and N. Grossman, 16-s–19-s.
Transition Temperatures of Mild Steels, Cleavage Fracturing and— A. B. Bagsar, 123-s–131-s.
Transition Temperature of Ship Plate as Affected by Variation in Notch in Impact Tests—R. S. Zeno and J. R. Low, Jr. 145-s–147-s.
Transition Temperature Studies of Slotted Tensile Specimens—H. R. Thomas and D. F. Windenburg, 209-s–215-s; Discussion—E. M. MacCutcheon, 215-s–216-s.
Transition Temperature Tests-Cleavage Fracture of Ship Plate as influenced by Size Effect—Wilbur M. Wilson, Robert A. Hechtman and Walter H. Bruckner, 200-s–207-s; Discussion—H. W. Wilson, 208-s.
Transition Temperature Tests of Wide Notched Ship Plates—A. Boodberg, H. E. Davis, E. R. Parker and G. E. Troxell, 186-s–199-s.
Triaxial Specimens, New Methods for Testing—Georges Welter, 529-s–536-s.
Tubes, Effect of Temperature and Welding Conditions on Strength of—G. E. Troxell, E. R. Parker, H. E. Davis and A. Boodberg, 34-s–49-s; Discussion—John Vasta, 49-s, 70-s.
Weldability-Brittle Transition Temperatures of Various Low-Carbon Steels—N. Grossman and C. W. MacGregor, 267-s–271-s.
Weldability-Ductility of Steels for Welded Structures—1947 Campbell Memorial Lecture—A. B. Kinzel, 217-s–234-s.
Weldability-Effect of Composition of Carbon and Alloy Steels—C. M. Offenhauer and K. H. Koopman, 234-s–252-s.
Weldability—Eliminating Cracking in Magnesium Arc Welds—P. F. George, 273-s–276-s.
Weldability of Alloys for High-Temperature Service—George E. Linnert, 385-s–405-s.
Weldability of 0.5% Chromium–0.5% Molybdenum Pipe Steel—R. C. Fitzgerald, A. B. Wilder, G. V. Smith and A. E. White, 457-s–469-s.
Weldability of Plate Steels, Use of Carbide-Stabilizing Elements in—F. F. Franklin, 20-s–26-s.
Weldability of Steels for Elevated Temperatures—A. B. Wilder and J. O. Light, 607-s–609-s.
Weldability—The Meaning and Measurement of Transition Temperature—R. D. Stout and L. J. McGeady, 299-s–302-s.
X-ray Measurement of Strain in Metal, 612-s–613-s.
